Closing Date: 12:00 PM Thursday 1 November 2018

Enquiries: Warwick Freeman, Tel: (02) 8813 9813,

Email: augility.procurement@ap.jll.com

Copies of RFT: www.tenders.gov.au

SPECIAL OPERATION HELICOPTERS

AD/RFI/7300/1**2 NOV**

- *Request for Information - Capability Acquisition and Sustainment Group (CASG)*

Defence is planning to acquire a fleet of light helicopters to enhance the ADF Special Operations Aviation Capability as advised in the 2016 Defence White Paper. The helicopters are to be proven (already in service) Commercial or Military off the shelf, optimised for operating in dense urban environments, and capable of being rapidly deployed by air transport in ADF Boeing C-17A Globemaster III aircraft. The helicopter will primarily support air assault of small Special Forces teams. To fulfil its secondary roles, the helicopter should be capable of being rapidly re-configured by fitment of simple, proven, Intelligence, Surveillance and Reconnaissance (ISR) equipment and weapons systems. The helicopter should also be capable of conducting general utility.

This RFI also seeks information on through life sustainment and support services such as; maintenance and engineering support, supply chain logistics warehousing and management, training of Defence aircrew and ground support staff, supply of Ground Servicing Equipment and various training simulators and aids, as well as access to Intellectual Property (IP) and Technical Data (TD).

The project is currently in an exploratory phase, collecting information and proposals to inform concepts for capability realisation. The project is considering a wide range of procurement options based around a light helicopter as the major system. The acquisition strategy for the project is developmental and is subject to Government approval.

This RFI seeks industry's input as to the potential solutions which could satisfy the Project's needs. The initial phase is to identify major systems which can form the basis for the capability

and is the primary focus of this engagement. For this reason, the Project seeks experienced Prime System Integrators who hold the ability to source a suitable platform, conduct integration of specialist role equipment and support the introduction into service of a new aviation capability. Proposals should address ongoing support in sustainment which may include engineering and supply services, while allowing for flexibility in transfer of technical data for sustainment services by a provider of the Defence's choosing.

Responses are to be submitted on the basis that funding for this project has not yet been approved and that Defence may, in accordance with the conditions of registration, decide not to proceed with this RFI process or any further procurement process.

You are under no obligation to respond to this RFI. However, please note that the information being sought by this RFI has been identified by Defence as important for planning purposes, and to inform Defence decision making. In seeking your response, Defence wishes to ensure that this planning and decision making occurs with the full benefit of information provided by your organisation.

Closing Date: 2:00 PM Friday 2 November 2018

Enquiries: Major Travis Hunt, Project Manager LAND2097PH4,

Email: AAPO.industry@defence.gov.au

Copies of RFI: www.tenders.gov.au

PRESSURE HULL COLLAPSE TESTING PROJECT

RFT 6023

14 DEC

- Request for Tender - Defence Support and Reform Group (DSRG)

The Defence Science and Technology (DST) Group is seeking to verify and validate software tools and procedures that will be used for qualification and acceptance of the pressure hull design of the Future Submarine (FSM). DST intends to obtain the data required for validation by undertaking a Collapse Testing Project (CTP) involving the design, construction, measurement, monitoring, testing to collapse, and disposal of three, large ring-stiffened cylinders.

The aim of the Pressure Hull Collapse Testing Project is for the Commonwealth of Australia (CoA) to undertake collapse testing of three large, ring stiffened cylinders in order to validate design assessment tools that will be used for assurance and acceptance of the FSM pressure hull and management of through-life structural issues and design changes.

The test models will be as large as possible so as to minimise scaling effects and it is assumed that the tests will be carried out at an overseas facility as no suitable hydrostatic pressure test chamber presently exists within Australia. In so far as practical, it is preferred that the test cylinders, end-enclosures and peripheral equipment be constructed in Australia; these would then be shipped overseas in commercial inter-modal shipping containers. Dimensional measurement of the cylinders and end-enclosures will be carried during and at the completion of fabrication. Measurements of the outer surface will also be required (at or near the testing facility) to confirm that no changes have occurred during transit and to map the collapsed shape of the cylinders after testing. The installation, set-to-work, and operation of the monitoring system used for the tests will be carried out in close proximity to where the testing is conducted.

Industry Briefing: An Industry Briefing will be held at **DST, 506 Lorimer Street, Fishermans Bend Vic from 9:00 AM on Tuesday 23 October 2018**. Nominations to attend the briefing are to be forwarded in writing to the Enquiries Officer by 9:00 AM on Tuesday 9 October 2018 if wishing to attend.

Timeframe for delivery: All three collapse tests must be completed by 30 June 2022.

Closing Date: 2:00 PM Friday 14 December 2018

Enquiries: Roger O'Leary, Tel: (08) 7383 0185,

Email: roger.oleary2@defence.gov.au
