## DEF(AUST) GENERIC SOLDIER ARCHITECTURE, INDUSTRY WORKING GROUP

**AHQ-LNIC-ASGSA-0120****19 FEB**

- Industry Briefing - Defence Support and Reform Group

Army Headquarters, through the Land Network Integration Centre (LNIC) seeks to enhance soldier operational effectiveness via integrated, adaptable and affordable electronic soldier system infrastructure requirements. Development of DEF(AUST) Generic Soldier Architecture has commenced and will define power, data and related physical/ human factors architecture interface standards for the soldier platform. At its completion DEF(AUST) Generic Soldier Architecture will be implemented as the interface standard for soldier systems, sub-systems and hosted software procured and sustained for army. DEF(AUST) Generic Soldier Architecture will facilitate a data rich digital soldier platform environment, with open/ generic standards creating integration agility, interoperable soldier systems and sub-systems able to rapidly capitalize on frequent technology developments to enhance close combatant capability. LNIC will be seeking expressions of interest in Feb 2020, from qualified parties with an interest in participating in an Engineering Working Group which will contribute to defining Data Interface Standards. The purpose of these Industry Briefings is to provide an update on the development of DEF(AUST) Australian Generic Soldier Architecture project and details of an ATM activity planned for February 2020 for the purpose of establishing an Industry Engineering Working Group.

# DEFENCE TENDERS – AMENDMENTS

## CYBER RESEARCH NETWORK AGREEMENTS UNDER NGTF

**CYBER CALL 2019****18 FEB***Ext. From 16 Feb*

### - Request for Proposal - Defence Support and Reform Group

The Cyber theme seeks to leverage vibrant cyber science, technology and innovation capabilities across Australia to develop technology solutions of high relevance to Defence. Through partnerships with CSIRO's Data61, academia and industry, Defence aims to understand the potential of cyber technologies, create prototype systems, and demonstrate the practical application of systems to Defence problems. The Cyber Theme seeks to inform Defence of the potential benefits and practical limitations of cyber technologies through studies and demonstrator systems. Follow on work will usually be needed to mature these ideas for practical use by Defence. We are seeking submissions from academia, industry and other research agencies detailing how you propose to contribute to the research objectives of Defence in cyber. Defence interests in cyber differ substantially from industry and enterprise cyber security. Rather than defining these in detail, which would be time consuming and complex, a number of project descriptions are provided as examples of Defence's current needs. These are organised into Cyber Artificial Intelligence and Autonomy, the Human Element, Trustworthy & Resilient Systems, Situational Awareness, Mission Assurance and Threat Countermeasures and Effects.

**Estimated Value:** Up to \$10,675,000

**Closing Date:** 2:00 PM Tuesday 18 February 2020

**Enquiries:** NGTF Theme Leader - Cyber, Tel: (08) 7389 5506,

## NEW ZEALAND TENDERS

### MAINTENANCE, REPAIR AND OVERHAUL MOBILITY PRODUCTS

**22292175****3 MAR**

- *Notice - New Zealand Defence Force*

In order to enable its strategic objectives, the New Zealand Defence Force (NZDF) is currently reviewing its Maintenance, Repair and Overhaul (MRO) practices for non-platform equipment. The equipment is to be managed by the Defence Equipment Management Organisation (DEMO) using SAP as its enterprise resource planning (ERP) system. The NZDF MRO System is complex and requires significant knowledge and training to operate effectively. NZDF seeks to enable better practice through standardisation and simplification of processes & policies, with the support of enabling technologies. As such it is seeking information from potential suppliers of mobile technology solutions that would enable process efficiencies, and simplify work for operational users. The NZDF seeks to identify mobility products that are currently available in the market that will facilitate good process, capture quality data from a range of sources, and support the evolution of MRO culture. In particular the product must be:

- A commercial off-the-shelf solution.
- Able to integrate with SAP.
- Support locally.
- An end-to-end MRO Capability across the MRO value chain.

**Closing Date:** 3:00 PM Tuesday 3 March 2020

## SIDE SCAN SONAR SYSTEM

**RFX1950****5 MAR**

*- Request for Tender - New Zealand Defence Force*

New Zealand Defence Force has a requirement for HMNZS MATATAUA (MAT) to provide Military Hydrographic Capability in order to understand the underwater littoral environment. The capability will result in military or other vessels of strategic/operational importance being able to locate underwater objects of interest and to make use of sea areas that otherwise may be denied by lack of depth or underwater obstruction information. The Royal New Zealand Navy equipment no longer meets operational requirements and NZDF is seeking a new side scan sonar system which has the ability to operate from any RNZN boat and other small vessels, as required.

**Closing Date:** 11:30 PM Thursday 5 March 2020

**Enquiries:** Sam Morgan

**Copies of RFT:** <https://nzdf.bravosolution.com>

## RETROSPECTIVE SAFETY CASE RNZN ANZAC CLASS VESSELS

**RFX\_2042****13 MAR**

*- Request for Tender - New Zealand Defence Force*

The New Zealand Defence Force (NZDF), through the Royal New Zealand Navy (RNZN), has a requirement to develop retrospective Safety Case (SC) for the Australia New Zealand Army Corps (ANZAC) class vessels and integrate the safety cases developed under the Frigate Systems Upgrade (FSU) in order to formally demonstrate the vessel is safe to operate and be compliant with the Health and Safety at Work Act (HSWA) 2015.

The ANZAC class vessels were commissioned in 1997. While they have been operated safely for many years a formal SC is now required to show all hazards are being actively managed.

A "Safety Case" is used across NZDF to provide the evidence that a system is "safe to operate" and is "operated safely". It is a logical set of documents that describes risk in terms of the hazards presented by the systems and platform for specified modes of operation.

**Closing Date:** 5:00 PM Friday 13 March 2020
