

SEA POWER 2022

SEA POWER 2022

The headline feature of this edition – Sea Power 2022 – will examine major and minor Australian naval projects, including the historic decision to acquire nuclear-powered submarines under the AUKUS agreement; place Australian sea power in a regional context; and look to customs and border protection, including maritime patrol and surveillance.

We will also look at the RAN's other major projects underway at the present time, including Anzac capability upgrades, new surface combatants and mine hunting technologies.

As the waters of the Indo-Pacific become increasingly contested, and the Australian government places greater strategic importance on naval capabilities, our in-depth reporting and strategic insights will help inform readers of the trends beneath the headlines.

This edition will be distributed on the floor of the Indo-Pacific tradeshow, held between 10-12 May, providing incredible visibility to an influential international audience.

PODCAST

This month's podcast will complement our print coverage of Sea Power in 2022 as navies around the Indo-Pacific modernise and expand their fleets amidst rising geopolitical tensions.

HOT TOPICS

- Nuclear-powered submarines
